Diffusion in Nanoporous Materials

Two-Volume Set

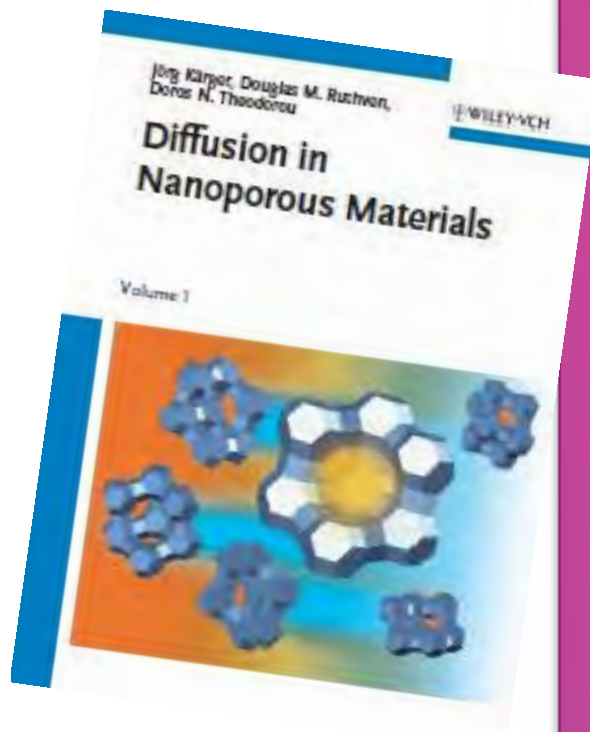

Jörg Kärger, Douglas M. Ruthven, and Doros N. Theodorou

The only book that combines the important process of diffusion with highly interesting porous solids!

Diffusion in Zeolites and other Microporous Solids, originally published in 1992, set the standard in the field for a very long time. This new two-volume set will become THE reference for the next decade. Jointly written by three well known researchers in this field, it presents a coherent treatise, rather than a compilation of separate review articles, covering the theoretical fundamentals, molecular modeling, experimental observation and technical applications. A stringent structure offers beginners a didactical approach, and specialists a wide variety of information.

From the contents

Introduction
THEORY
Diffusion as a Random Walk
Diffusion and Non-Equilibrium Thermodynamics
Diffusion Mechanisms
Single-File Diffusion
Sorption Kinetics
MOLECULAR MODELLING
Constructing Molecular Models and Sampling
Equilibrium Probability Distributions
Molecular Dynamics Simulations
Infrequent-Event Techniques for Diffusion in Microporous Solids
MEASUREMENT METHODS
Measurement of Elementary Diffusion Processes
Diffusion Measurement by Monitoring Molecular Displacement
Imaging of Transient Concentration Profiles
Direct Macroscopic Measurement of Sorption and Tracer Exchange Rates
Chromatographic and Permeation Methods of Measuring Intraparticle Diffusion
DIFFUSION IN SELECTED SYSTEMS
Amorphous Materials and Extra-Crystalline (Meso/Macro-)Pores
8-Ring Zeolites
Large-Pore (12-Ring) Zeolites
Medium-Pore (10-Ring) Zeolites
Metal-Organic Frameworks (MOFs)
SELECTED APPLICATIONS
Zeolite Membranes
Diffusional Effects in Zeolite Catalysis
