

## Toxicologist for the Chemical Industry

- The company is a global supplier of flavourings and fragrances as well as cosmetic raw materials and active ingredients
- The company is looking for a Toxicologist who will hold a number of interesting and important responsibilities within the division of Product Safety, Health and Environmental Compliance
- Will in the first instance be responsible for the monitoring and testing of both new and existing substances within the company's product range
- Ensures the notification and coordination of new substances
- Responsible for external studies including the contracting of the necessary studies covering registration and security review

### The Ideal Candidate

- Has an advanced level University science degree
- Should have experience in the design, direction and assessment of complete toxicology testing programs
- Well developed communication and negotiation skills are of great importance
- Has a mature self-confident and well-balanced personality and possesses a high standard of ethical and intellectual integrity
- Is required to focus on multiple issues at one time, and must have the ability to organise and direct diverse activities in a changing environment, often under time pressure
- Possesses a strong intercultural orientation and interest in a multicultural environment
- Has strong team player skills, who is able to define problems and seek alternate solutions based on solid scientific judgement
- Fluency in both written and spoken English is essential
