Physics
(International Physics Studies Program)

Zentrale Studienberatung

UNIVERSITÄT LEIPZIG
1. COURSE: **B. SC. PHYSICS**  
   (International Physics Studies Program)

2. CERTIFICATE: Bachelor of Science

3. REGULAR DURATION: 6 semester  
   CREDIT POINTS: 180 credit points (CP)  
   START FOR BEGINNERS: winter semester

4. ENTRANCE REQUIREMENTS:

   The general or subject oriented matriculation standard (12 year school) is necessary for the admission. Further certificates have to be acknowledged by the responsible and officially recognized administration.

   Applicants whose native language is not English need to submit a B2 - level certificate. Alternatively, a proof of a minimum of 500 hours of English can be provided in form of a transcript of the secondary school certificate or a letter of confirmation from the secondary school.

   ADMISSION CAPACITY RESTRICTIONS: None*

5. COURSE CONTENT:

   Aim of the Bachelor of Science course is to acquire fundamental knowledge and methods in physics such that graduates gain a first overview of the scope of physical insight and physics research as well as the application potential. This is achieved in courses of experimental and theoretical physics, in mathematics and in the laboratory; all these courses aim both at fundamental and application relevant knowledge. The obligatory education is complemented by courses that might be chosen either from a topical physics research area or from a non-physics specialization, e.g. in chemistry, information technology or mathematics and might be further supplemented by a German language course. The study program is completed by a scientific project, the B.Sc. thesis.

   An indispensable tool of physics is mathematics. Therefore the participation in a bridge course in mathematics is recommended, but is not compulsory. At the beginning of your studies the learning of essential mathematical techniques is supported in courses on mathematical methods by highlighting these techniques by the application to fundamental physics problems.

* Please inform yourself on the Internet.
In graduating in the B. Sc. Physics you acquire fundamental competences in physics, measurement technology and applied mathematics. This guarantees a head start in the job market that presents rapidly changing challenges to graduates. The unemployment rate for physicists has been low for years. Moreover, the B.Sc. in Physics is the ideal starting point to embark on a M.Sc. program in physics.

6. COURSE STRUCTURE:

The course contents are taught in single, organizationally independent units (modules). Modules contain clearly defined areas of knowledge that have a factual or thematic relationship. Modules might contain various teaching units, e.g. lectures (L), seminars (S) or laboratories (P) and are concluded by a final exam. Modules are rated by their teaching load in credit points (CP); one credit point corresponds to an average teaching load of 30 hours.

There are three basic forms of modules:
- Obligatory modules: to be completed by all students
- Obligatory modules of choice: for the students to choose from a thematically restricted pool of modules
- Electives: for the students to choose freely.

The B. Sc. course in Physics is concluded with the B. Sc. thesis (12 CP).

7. COURSES, MODULES AND EXAMS SYNOPSIS:

Abbreviations: EP = Experimental Physics, TP = Theoretical Physics, MA = Mathematics, L = lecture, S = seminar, P = lab course, CP = credit points. Except for the B.Sc. thesis all modules are concluded with an exam.
Modules EP1-EP5, TP1-TP5, MA1-MA3, FP1, NUM, and POC are obligatory education. The non-physical subject has to be chosen between chemistry and computational software, the introductory German language course (which is compulsory for international students) and the English course for Physicists.

Electives II:
- Mathematics 4 - Further Mathematics for Physicists
- Nuclear and Elementary Particle Physics
- Quantum Mechanics 2
- Statistical Physics 2

Electives III:
- Semiconductors I
- Laboratory Work in Semiconductors
- Introduction to Photonics I
- Spin Resonance I
- Ion Beams I
- Superconductivity I
- Astrophysics I - Star Physics
- Electronics I
- Quantum Physics of Nanostructures
- Physics of Porous Materials I
- Introduction to Computer Simulation I
- Introduction to Chemistry
- Introduction to Computational Software
- Science Communication
- unless the last three courses were already chosen in the first three semesters

8. EMPLOYMENT POSSIBILITIES:

The B.Sc. physics program provides the basic knowledge, capabilities and scientific methods for employment in industry and research work in physics or related fields. The graduates have reached a state of knowledge and practice that enables them for further scientific self-education. Traditional fields of physicists’ employment are for instance microelectronics, scientific and medical device construction, fine mechanics, engineering, optics, industrial chemical processing and communication technology. Due to the acquirement of analytical research competences and problem solving strategies during their studies, physicists are often sought for even in areas quite unrelated to physics, e.g. in management consultancies. The successful Bachelor in Physics is, however, invited to continue her/his education in the form of Master Studies in Physics or in a related subject.
9. CONSULTANTS:

Experimental Physics:
Prof. Dr. P. Esquinazi
Institute for Experimental Physics II
Faculty of Physics and Earth Sciences
04103 Leipzig, Linnéstr. 5, room 412
Tel.: 0341 97 32750

Theoretical Physics:
Prof. Dr. K. Kroy
Institute for Theoretical Physics
Faculty of Physics and Earth Sciences
04103 Leipzig, Brüderstr. 16, room 307
Tel.: 0341 97 32436

COURSE GUIDANCE SERVICE AND EXAMINATION OFFICE:

Kristin Riedel
Isabell Schulthoff
04103 Leipzig, Linnéstr. 5, Room 215
Tel.: 0341 97 32407/32404;
Fax: 0341 97 32499
E-Mail: studium.phys.geo@uni-leipzig.de

Dr. Konrad Schiele
04103 Leipzig, Linnéstr. 5, Room 227
Tel.: 0341 97 32406

Opening times:  Tu 09:00 - 12:00 a.m., 01:00 - 03:30 p.m.
              Th 09:00 - 12:00 a.m.

The information on the course is subject to the confirmation by the board of accreditation.
